Question **2**

Correct Marked out of 5.00

□ Flag question Sam loves chocolates and starts buying them on the 1st day of the year. Each day of the year, x, is nu from 1 to Y. On days when x is odd, Sam will buy x chocolates; on days when x is even, Sam will not $\mathfrak x$ any chocolates.

Complete the code in the editor so that for each day Ni (where $1 \le x \le N \le Y$) in array arr, the numb chocolates Sam purchased (during days 1 through N) is printed on a new line. This is a function-only so input is handled for you by the locked stub code in the editor.

Input Format

The program takes an array of integers as a parameter.

The locked code in the editor handles reading the following input from stdin, assembling it into an a integers (arr), and calling calculate(arr).

The first line of input contains an integer, T (the number of test cases). Each line i of the T subsequen describes the ith test case as an integer, Ni (the number of days).

Constraints

1 ≤ T ≤ 2 × 105

 $1 \le N \le 2 \times 106$

 $1 \le x \le N \le Y$

Output Format

For each test case, Ti in arr, your calculate method should print the total number of chocolates Sam μ by day Ni on a new line.

3

3

Sample Output 0

1

1

4

Explanation

Test Case 0: N = 1

Sam buys 1 chocolate on day 1, giving us a total of 1 chocolate. Thus, we print 1 on a new line.

Test Case 1: N = 2

Sam buys 1 chocolate on day 1 and 0 on day 2. This gives us a total of 1 chocolate. Thus, we print 1 α line.

Test Case 2: N = 3

Sam buys 1 chocolate on day 1, 0 on day 2, and 3 on day 3. This gives us a total of 4 chocolates. Thu on a new line.

Answer: (penalty regime: 0 %)

| | Input | Expected | Got |
|--|-----------|--------------|--------------|
| | 3 1 | 1 | 1 |
| | 2 | 4 | 4 |
| | 10 | 1296 | 1296 |
| | 71 100 | 2500 1849 | 2500 1849 |
| | 86 54 | 729 400 | 729 400 |
| | 40 9 | 25 1521 | 25 1521 |
| | 77 9 | 25 49 | 25 49 |
| | 13 98 | 2401 | 2401 |

- Football team A, has played three matches, and has scored { 1 , 2 , 3 } goals in each match respe
- Football team B, has played two matches, and has scored { 2, 4 } goals in each match respective
- Your task is to compute, for each match of team B, the total number of matches of team A, whe has scored less than or equal to the number of goals scored by team B in that match.
- In the above case:
- For 2 goals scored by team B in its first match, team A has 2 matches with scores 1 and 2.
- For 4 goals scored by team B in its second match, team A has 3 matches with scores 1, 2 and 3.

Hence, the answer: {2, 3}.

Complete the code in the editor below. The program must return an array of m positive integers, one maxes[i] representing the total number of elements nums[j] satisfying nums[j] \leq maxes[i] where $0 \leq$ j \leq i < m, in the given order.

It has the following:

```
nums[nums[0],...nums[n-1]]: first array of positive integers
maxes[maxes[0],...maxes[n-1]]: second array of positive integers
```

Constraints

- 2 ≤ n, m ≤ 105
- $1 \le nums[j] \le 109$, where $0 \le j < n$.
- $1 \le \text{maxes}[i] \le 109$, where $0 \le i < m$.

Input Format For Custom Testing

Input from stdin will be processed as follows and passed to the function.

The first line contains an integer n, the number of elements in nums.

The next n lines each contain an integer describing nums[j] where $0 \le j < n$.

The next line contains an integer m, the number of elements in maxes.

The next m lines each contain an integer describing maxes[i] where $0 \le i < m$.

- 4

We are given n = 4, nums = [1, 4, 2, 4], m = 2, and maxes = [3, 5]. 1. For maxes[0] = 3, we have 2 elements in nums (nums[0] = 1 and nums[2] = 2) that are \leq maxes 2. For maxes[1] = 5, we have 4 elements in nums (nums[0] = 1, nums[1] = 4, nums[2] = 2, and num that are \leq maxes[1]. Thus, the function returns the array [2, 4] as the answer. Sample Case 1 Sample Input 1 5 2 10 4 8 4 3 1 7 8 Sample Output 1 1 0 Explanation 1 We are given, n = 5, nums = [2, 10, 5, 4, 8], m = 4, and maxes = [3, 1, 7, 8]. 1. For maxes[0] = 3, we have 1 element in nums (nums[0] = 2) that is $\leq maxes[0]$. 2. For maxes[1] = 1, there are 0 elements in nums that are \leq maxes[1]. maxes[2]. 4. For maxes[3] = 8, we have 4 elements in nums (nums[0] = 2, nums[2] = 5, nums[3] = 4, and num that are \leq maxes[3].

- For maxes[2] = 7, we have 3 elements in nums (nums[0] = 2, nums[2] = 5, and nums[3] = 4) that

Thus, the function returns the array [1, 0, 3, 4] as the answer.
